## Oesophageal Manometry Report

Name **colin rogers2**

UR

DOB **1/01/1904**

Date **Thu, 4 Oct 2007**

### Indication

Lap-Band 10 years ago. Now more than original weight.  
Severe symptoms of reflux, but still eating large meals,  
cannot get adjustments right.

### Referring Doctor **Paul O'Brien**

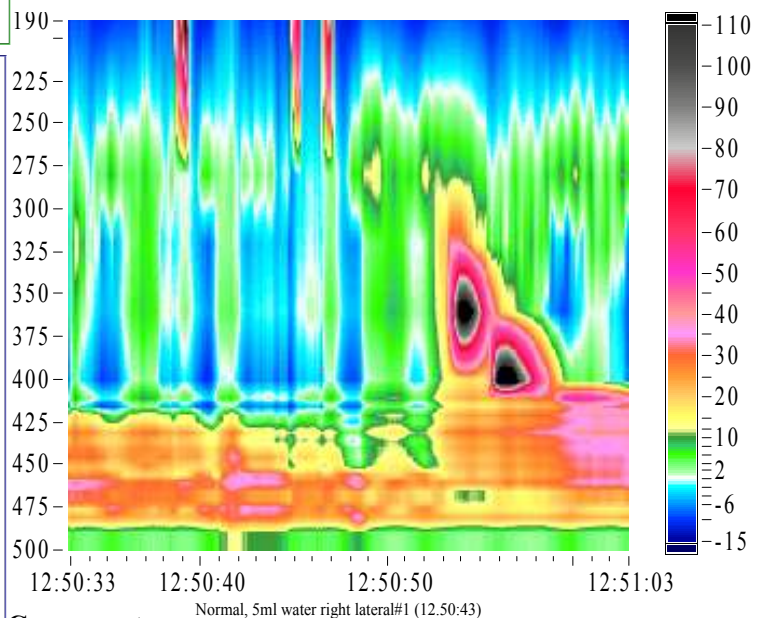

22 The Avenue, Windsor, 3181

Technician **Melissa Richards**

### LOS Relaxation **Present**

<b>Basal</b>	<b>Nadir</b>	<b>% Relx'n</b>
Median <b>0.0</b>	Median <b>0.0</b>	<b>100.0</b>
Max <b>0.0</b>	Max <b>0.0</b>	
Min <b>0.0</b>	Min <b>0.0</b>	

### Oesophageal Peristalsis **Marginal**

### Comments

At 1.7 mls (minimal symptoms) a slightly enlarged high pressure area was observed with a hiatus hernia. At increased volume 2.2 a much larger high pressure zone and gastric pouch were observed herniating into the chest. Oesophageal peristalsis was poor. LOS relaxation seemed appropriate. There was pooling of barium in the pouch and distal oesophagus with active reflux observed.

### Diagnosis

**Dr Paul Burton**
